languages in real-  
time.

Listen and speak  
in any language.  
TranslatEAR  
follows you,  
whenever and  
wherever.

Compatible with any  
phone that connects  
through Bluetooth

Learn about how it  
works on page 3

# OUR PURPOSE

One of the largest barriers of communication that exists across the world is language. No matter how much technology evolves, language is a form of communication that is difficult to overcome, as it is physically impossible to learn over 6,500 languages spoken around the globe. Language applications, such as Google Translate, work *some of the time*, but they are not always precise or quick enough for fast-paced conversations in foreign countries.

**OUR GOAL IS TO EXPAND COMMUNICATION ACROSS THE GLOBE BY ENCOURAGING THE STUDY OF LANGUAGE AND CULTURE.**

## PRODUCT DESIGN

- TranslatEAR is a single earbud, similar to Bluetooth earpieces
- 3.5 in. x 3 in. x 1 in. dimensions
- Can be worn in either ear with a variety of attachments to fit the ear comfortably
- Earbud and attachments are made of tough plastic that won't break easily
- Comes with a charging case and a cord to plug into the wall
- Lasts up to 36 hours with each full charge

# HOW IT WORKS

TranslatEAR is an earbud that translates languages in real-time. The product can be connected to any mobile phone through Bluetooth to establish the user's name and native language before using the product.

There are four important buttons on the earbud:

-  The first button on the top of the earpiece is the power button, marked with the power symbol.
-  The next button is a scroll, in which the user can surf through the offered languages in alphabetical order.

**LISTEN** The top button, marked with LISTEN, is held down by the user when he/she is listening to the unknown language. Within seconds, TranslatEAR will translate the phrase into the user's native language and voice it through the earpiece.

**SPEAK** The last button, marked with SPEAK, should be held down as the user responds. The earpiece will translate the sentences into the foreign language for the user to speak in the conversation. This allows the user to practice his/her foreign language skills, while still maintaining a conversation without long interruptions.

The device is programmed to recognize details and tones of many languages. To achieve this, TranslatEAR contacted thousands of linguists and native speakers to develop smooth translations. Colloquial language is constantly evolving, so TranslatEAR adds vocabulary regularly, with new product models coming out each year.

# THE BUZZ

**"I WILL NEVER USE ONE OF THOSE TRANSLATOR APPS AGAIN."**  
-JOSEPH ANGLE, CUSTOMER

**"WHERE WAS THIS WHEN I STUDIED ABROAD IN COLLEGE? I LOVE THIS PRODUCT AND ITS PURPOSE."**  
-ANGELA COTTON, CUSTOMER
